

ISMS Team: Dr. Vito Alamia, Dr. Geri Schmitt, and Patty Mitchell, RN

Performing Advanced Laparoscopic Surgery with Dr. Ibrahim Friko

Hello Vito

All the patients did great. We have not recorded any post-operative complication whatsoever. The patients were also appreciative of the services you provided them.

Gideon told me you'd already sent the canister for the LEEP machine. We would start performing colposcopy and LEEP in a short while. We just need to first of all re-organise our OB/GYN schedule in order to factor in colposcopy and LEEP. Thanks so much. Well, I've already performed a couple of open hysterectomies with the Ligasure, and man, it was so cool to use that apparatus. Haha, it makes me wonder how I survived all these years performing open hysterectomies without the Ligasure.

Thanks for spoiling me a little bit with such fanciful and yet practical gadgets that I could only dream of before I met your team. We've been using the laparoscopy set-up you gave us essentially because the picture quality is far better and the angled scopes offer greater maneuverability than the one we had. The next major laparoscopic surgery we intend performing on our own is LAVH!

Thanks so much for teaching me LEEP, the basic principles of LAVH, as well as the alternative approaches to performing vaginal hysterectomy and colpo-perineorrhaphy Thanks so much for the skill, equipment and

technology transfer. Thanks so much for the operations you performed. Thanks so much for giving us the inspiration to dream bigger and better in spite of our challenging limitations. It was such a pleasure working with you all including Patty and Kim. Thanks
